

AI runtime that detects and fixes bugs in real time, protecting web apps from AI slop

Pre-seed · October 2026

mehar@daybot.ca · karan@daybot.ca

PROBLEM

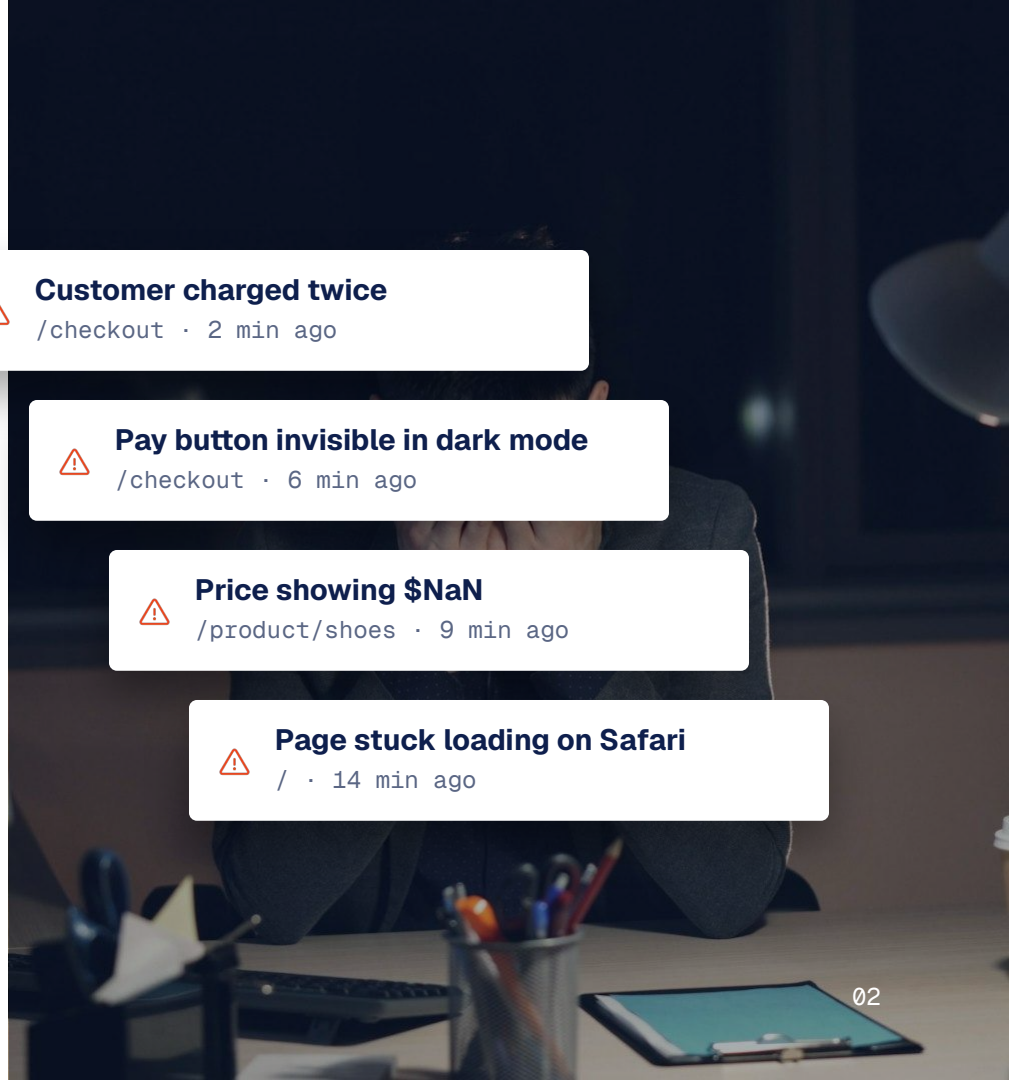

82% of companies have had AI-written code break in production.

$600B lost to downtime every year by the world's 2,000 largest companies

17% of shoppers have abandoned a checkout because the site had errors

30/30 engineers we interviewed fix these bugs by hand

New Relic 2026 · Splunk 2026 · Baymard 2025 · our interviews

WHY NOW

We built thousands of AI-generated stores. The bugs kept showing up at runtime.

01

Daybot, our first product. An AI store builder that made full dropshipping stores, checkout included. It made $7,000.

02

Thousands of stores later, the same bugs kept appearing at runtime: broken CSS, two people ordering at once, pages that didn't load, confusing buttons.

03

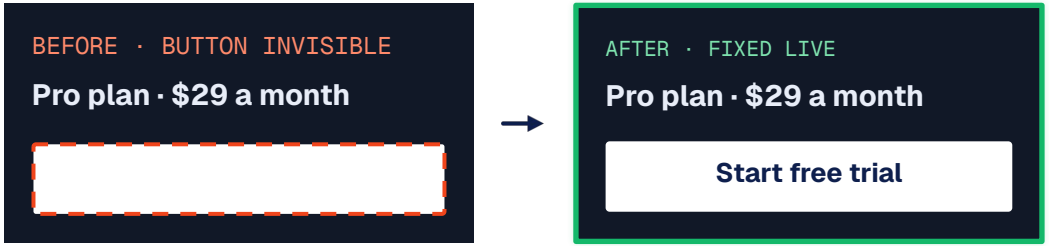

Every visitor is different. The bugs changed with each customer's device. Someone will open your app on a fridge.

PRODUCT

A 10 MB AI that fixes bugs live.

01 · Unreadable text (in testing)

02 · Double charge

10 MB

Our own AI model, small enough to ship inside an npm library and **run in every user's browser**.

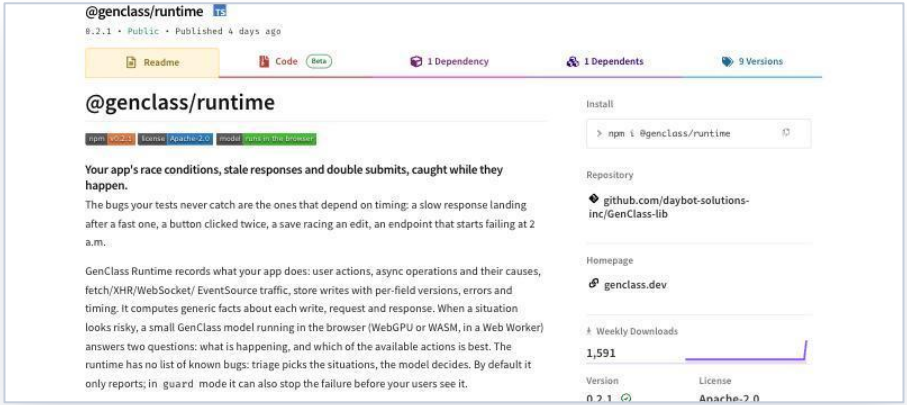

A 30B-parameter model: about 60 GB

GenClass: 10 MB

It beat a 150M-parameter version of itself, **17× bigger**.

TRACTION

We launched on October 8. Here's week one.

npmjs.com/package/@genclass/runtime

2,021
npm downloads in the first five days

8.1 GB
of our model sent to browsers by jsDelivr this month

1,484
live events tracked by our dashboard in week one

[10]
companies running GenClass

AI Agents love our library, just by constantly shipping to NPM we've gained 2000+ downloads organically. Claude, Codex, and Cursor keep on the lookout to always improve their code.

BUSINESS MODEL

Free and open source to install, $99 a month for the dashboard.

OPEN SOURCE

$0

The GenClass library and model, Apache-2.0. No dashboard.

PRO

$99/mo

The dashboard: analytics, P0/P1 email alerts. Trials available.

CUSTOM

$599/mo

Pro, plus a model trained on your own app.

$70B
spent each year on testing and monitoring software

$8.2B
2.4M teams shipping JavaScript web apps

$50M ARR
our one-year target, 15,000 teams

Market: Global Market Insights 2025 · MarketsandMarkets 2025 · SlashData 2025 · Stack Overflow 2025

COMPETITION

Build time is crowded. Runtime is wide open.

BUILD TIME Write and review code before it ships

- Claude Code
- OpenAI Codex
- Cursor
- GitHub Copilot
- Windsurf
- Lovable
- Bolt
- v0
- Replit
- Gemini
- CodeRabbit
- and many more

RUNTIME Watch the live app

Report crashes only

- Sentry
- Datadog
- New Relic
- Dynatrace

Fix bugs live

GenClass

Catches and fixes bugs live

TEAM

We built the runtime, the AI model and its training data ourselves.

Mehar (left) and Karanvir

Mehar Khanna

Co-founder

mehar@daybot.ca

Computer Science student at the University of Waterloo. Built Tutor-Tron, an AI education platform used by 500+ students.

Karanvir Khanna

Co-founder

karan@daybot.ca

Computer Science graduate from the University of Toronto. Previously worked on AI and optimization at KPMG and IPPINKA.

Together: Both two-time Hack the North winners and five-time hackathon winners. Built Daybot to 500+ stores and ~$7K in revenue before pivoting to GenClass.

Open-source runtime for 7 webapp frameworks

Our own 10 MB model, trained from scratch

Training data from 158 apps that we have direct control over with 100+ users each.

A website scanner at genclass.dev/scan

VISION

GenClass running in the background of every software.

NOW

A 10 MB model fixing bugs inside web apps

NEXT

The dashboard every dev team checks each morning

THEN

GenClass on every web page, by default
